Project 6: Art, AI and Ethical Implications

Overview

An artist can spend almost their entire lifetime working on their craft. What happens when AI creates art that almost looks similar to a particular artist or style? This open-ended project explores the ethical challenges and responsibilities associated with AI-generated output. Students will analyse dilemmas involving copyright, bias, and transparency while considering the impact of AI on artists and cultures.

Learning Outcomes

- *Ethics in AI*
- *Digital Responsibilities*

Project Plan

Project Activity	Time	Description
Launch	10-15 mins	The teacher will prompt some of the thought provoking questions to the class. Demonstrating art generation with one of the commonly used AI tools.
Think & Explore	20-25 mins	Assign various prompts to a group of students (of 3 or 4) and discuss the provided prompts. Let them explore both sides of using AI technology, the positive side, and its implications.
Discuss	1 week	Let each group create charts highlighting the same and present them to the class.

Launch

Prompt the following ethical questions among a group of children. Let them take turns reading the different prompts aloud. Students discuss their responses to the prompt & address the related questions.

Prompt: If you had an AI that could do your homework, would you use it?

Implications: Discuss honesty, the purpose of education, and the meaning of personal effort.

Prompt: Should AI be allowed to make decisions about who gets a job?

Implications: Consider bias in AI, the importance of human judgment, and the impact on employment.

Prompt: If AI can create art, should it be considered as valuable as human-made art?

Implications: Explore the essence of creativity, the role of human experience in art, and the meaning of art itself.

Prompt: Can an AI be a true friend?

Implications: Discuss the nature of friendship, emotional intelligence in AI, and human-AI relationships.

Think & Explore

The teacher demonstrates the ethical implications of AI-generated artwork. Showcase the recreation/modification of some of the artwork/photographs using AI technology.

(a) *(b)*

Figure: Image & Art modification with AI.

Prompt to the AI (a) What would this sculpture look like if a necklace were added? (b) Recreate this painting and substitute a few of the sunflowers with roses?

Art creation using AI technology has also become more common nowadays. It raises questions like:

- How will the technology impact creativity & artistic identity?
- When AI can make art, what does creativity mean now?
- Who gets credit for AI-generated work?
- Is it ethical for technology to use artists' work without their permission?

Let the class share their reactions about these questions and also their thoughts on the bigger question, "Is AI disrupting art?", "Is AI-created art a good idea, bad, or mixed? Why?"
